

Automated Order Status & Delay Escalation

Name	Fiza Syed
Date	17 August 2026
Cohort	Agentic AI Cohort 5
Assignment Title	GreenCart Order Automation

GreenCart Order Status & Delayed Shipment Escalation Notifier

Problem statement & weekly manual effort savings

GreenCart's support team checks each order's status individually and writes a separate email for every single one that takes about 2–3 minutes per order. With 100+ orders a day, that's ~29 hours/week just typing status emails. On top of that, nobody notices when an order gets stuck until a customer complains about it.

This workflow fixes both problems: it writes and sends the right email automatically based on the order's status, and it catches delayed orders on its own the moment they've been stuck for more than 2 days, no more waiting for a complaint.

Architecture breakdown

Why separate Set nodes per branch

Each order status needs a completely different tone — Processing should sound reassuring ("we're on it"), Shipped should sound like good news, and Delayed needs to sound apologetic. Trying to cram all three into one node with a bunch of if/else logic inside a single expression would be a mess to read and a nightmare to fix later. Giving each branch its own Set node means you can open just the one you care about, see exactly what it says, and test it on its own without touching the others.

Escalation boundary & edge-case handling

The rule is simple: if an order has been "Delayed" for more than 2 days, it escalates — meaning the warehouse team gets an internal alert email in addition to the customer's apology email. If it's been delayed for exactly 2 days or less, only the customer gets an email — no warehouse alert.

As for messy data — if `days_in_status` comes in blank or isn't actually a number, the workflow doesn't crash or throw an error. It just treats that value as 0 so the order still moves through the system safely instead of getting stuck.

Input Output

OUTPUT

4 items

timestamp	order_id	status	days	escalated
2026-08-17T22:44:09.039+05:00	GC-1002	Processing	2	false
2026-08-17T22:44:09.043+05:00	GC-1004	Processing	0	false
2026-08-17T22:44:09.045+05:00	GC-1008	Processing	1	false
2026-08-17T22:44:09.048+05:00	GC-1010	Processing	3	false

Live Test Results

- **Test 1: Processing**

Input payload (from pinned data, GC-1002):

```
{ "order_id": "GC-1002", "customer_name": "Sarah Chen", "email": "sarah.chen@example.com",  
  "order_status": "Processing", "days_in_status": 2 }
```

Set node output ("Processing Email"): subject and body confirming the order is being processed. Email sent: "Send Processing Email" fires to sarah.chen@example.com. No warehouse alert.

- **Test 2: Shipped**

Input payload (from pinned data, GC-1003):

```
{ "order_id": "GC-1003", "customer_name": "Marcus Lee", "email": "marcus.lee@example.com",  
  "order_status": "Shipped", "days_in_status": 1 }
```

Set node output ("Shipped Email"): shipping confirmation subject/body. Email sent: "Send Shipped Email" fires to marcus.lee@example.com. No warehouse alert.

- **Test 3: Delayed (days_in_status = 4)**

Input payload (from pinned data, GC-1001):

```
{ "order_id": "GC-1001", "customer_name": "Taylor Chen", "email": "taylor.chen@example.com",  
  "order_status": "Delayed", "days_in_status": 4 }
```

IF result: $4 > 2 \rightarrow \text{True}$. Emails sent: "Send Delayed Email" (apology to customer) and "Send Warehouse Email" (SLA breach alert to warehouse) both fire. Sheet row: logged via "Delayed-Escalated Log" — status= Delayed, days= 4, escalated= true (after applying the fix from earlier).

- **Test 4: Delayed (days_in_status = 2)**

Input payload (from pinned data, GC-1005):

```
{ "order_id": "GC-1005", "customer_name": "Daniel Khan", "email": "daniel.khan@example.com",  
  "order_status": "Delayed", "days_in_status": 2 }
```

IF result: $2 > 2$ is false $\rightarrow \text{False}$. Email sent: "Send Delayed Email" only (apology to customer). No warehouse alert sent. Sheet row: logged via "Delayed-Not Escalated Log" — status= Delayed, days= 2, escalated= false.
